

SMART Reports

Microsoft Fabric is an end-to-end analytics and data platform designed to unify various data-related tasks and services into a single, cohesive solution.

It integrates multiple services like Power BI, Azure Synapse Analytics, and Azure Data Factory into one platform, simplifying data management and analytics.

Traditionally organisations would embark on a data warehouse journey to achieve their requirements for reporting and analytics.

This approach was costly and rigid and was out of reach for many companies. Microsoft Fabric handles unstructured, semi-structured and structured data, making it much more versatile.

While the data warehouses of the past required highly skilled engineers to deploy and manage, Fabric integrates easily with Power BI for analysis and reporting, meaning that users of all skill levels can access the information they need. Most importantly, data warehousing was expensive and took a long time to deploy.

By comparison, Microsoft Fabric reduces the need for extensive configuration and management, lowering costs and simplifying maintenance.

Key Features and Benefits

AI Integration allows for forecasting, data augmentation, automated insights and reduces manual data processing

Real-Time Analytics drives timely decision-making based on latest data

Cost Efficiency reduces cost associated with data duplication and integration

Enhanced Security and Governance ensures robust security and governance, with centralised administration and automatic application of permissions across services

Scalability designed to scale with your business needs, supporting large volumes of data and complex analytic workloads

Simplified Data Integration allows for seamless integration of data from various sources, making it easier to manage and analyse data

TEKenable's data engineering team has vast experience in delivering data projects for our clients. We believe the introduction of Microsoft Fabric has made powerful reporting and analytics more accessible for organisations of all sizes.

Our SMART Reports offer is a quick and easy way to embark on your Microsoft Fabric journey, as we deliver it in conjunction with your existing project. It allows you to get experience of the technology in a controlled way and can be expanded in the future as your needs grow, incorporating the other parts of the organisation.

While we deploy your project, we will:

Create a Microsoft Fabric instance,

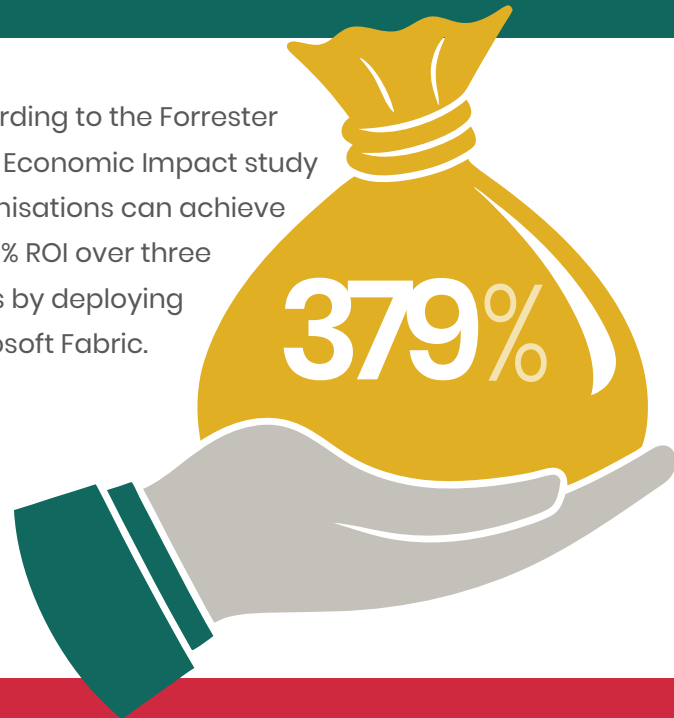

Flash your system data daily into this subscription.

Create an initial report alongside your project lead

According to the Forrester Total Economic Impact study organisations can achieve a 379% ROI over three years by deploying Microsoft Fabric.

You are now ready for reporting, machine learning and analytics. We deliver a follow up one hour workshop 4-6 weeks after this to review your experience and provide any feedback.
