

AI Agent Readiness & Governance

AI Agents offer a significant opportunity to improve productivity, reduce manual effort and embed intelligence directly into business processes. They can support teams by handling repetitive tasks, improving consistency and coordinating activities across systems.

Challenges faced

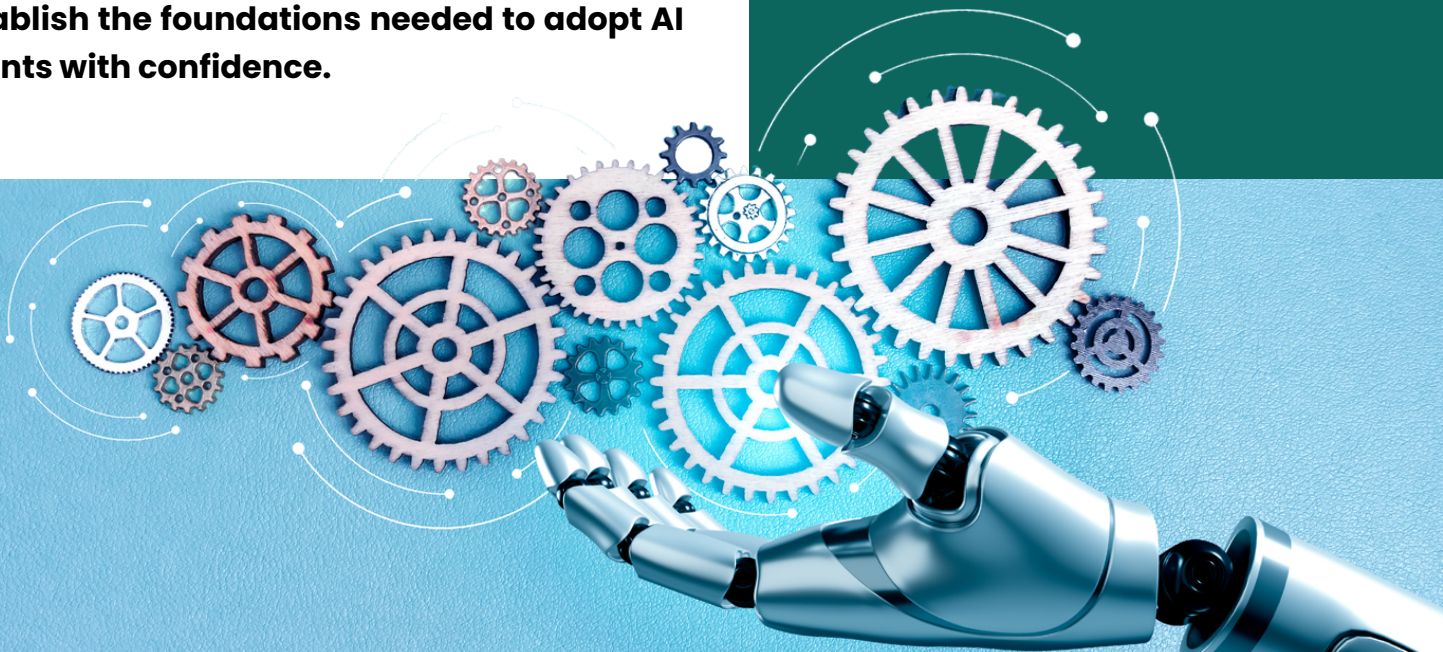

Many organisations are not yet ready to deploy AI Agents at scale. Without the right governance, controls and operating model in place, AI adoption can create risk, inefficiency and uncertainty.

Our AI Agent Readiness & Governance engagement is a short, advisory-led programme **designed to help organisations establish the foundations needed to adopt AI agents with confidence.**

Why readiness matters

Taking a structured approach upfront helps reduce the risk of uncontrolled agent growth, unclear ownership, data exposure, compliance issues and avoidable rework.

What it covers

Governance and control framework:

Define who can create, approve, publish and manage agents, with clear ownership and accountability.

Security, compliance and data protection:

Review access controls, identity, data boundaries, confidentiality requirements and potential data exposure risks.

Platform and tenant readiness:

Assess Microsoft 365, Copilot Studio and Power Platform configuration to identify gaps before scaling.

Licence and cost management:

Build visibility around licensing, consumption, cost ownership and future scale planning.

Agent lifecycle and operations:

Define how agents will be governed from creation through to retirement, including monitoring and operational responsibilities.

Agent store readiness:

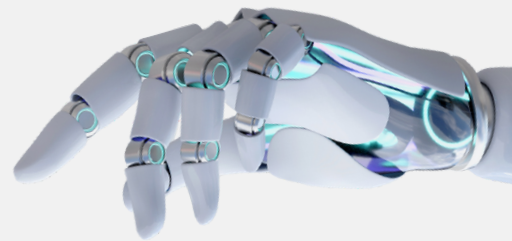

Prepare for the introduction, publishing and management of organisational agents at scale.

How we deliver it

- Kick-off and current state review
- Governance and administrative controls
- Security, compliance and data protection
- Platform readiness and tenant configuration
- Licensing and cost governance
- Agent lifecycle and operating model
- Agent Store readiness and final review

What you will receive

- A clear view of your readiness to adopt AI agents
- A defined governance model and control approach
- Agreed roles, responsibilities and approval processes
- Security, compliance and data considerations
- A practical understanding of platform and licensing implications
- A prioritised set of actions and next steps

Build the foundations to adopt AI agents safely, securely and at scale.

Book a session with one of our specialists to assess your organisation's readiness today.
